Exaton 49S

49S is a basic, agglomerated flux for electroslag strip surfacing. This flux is particularly intended for high-speed welding. In spite of high welding speed, flux 49S gives excellent slag removal and bead appearance, also for niobium-alloyed strip electrodes. It is used together with strip electrodes of the chromium, chromium-nickel and chromium-nickel-molybdenum steel types with or without niobium.

Specifications	
Classifications	EN ISO 14174 : ES A FB 2B

Welding Current	2200 A (Using 60x0.5 mm strip)
Slag Type	Fluoride basic CaF2-Al2O3
Density	nom: 1.0 Kg/l
Basicity Index	nom: 4.4
