## Exaton 31S

Exaton 315 is a neutral welding flux for submerged arc welding giving good slag removal and fine bead appearance. It is suitable for surfacing with strip and wire electrodes and can also be used for joining. Exaton 31S gives the following typical chemical and mechanical properties of all-weld metal for the wire electrodes below. Exaton 25.22 .2 .LMn is a manganese alloyed chromium-nickel-molybdenum filler material used for welding Sandvik 2RE69 (UNS S31050, 1.4466), Sandvik 3R60 U.G. (UNS S31603, 1.4435). The weld deposit has excellent low temperature toughness that makes it suitable for joining stainless steels for cryogenic service. Very good resistance in ammonium carbamate and nitric acid. Huey testing is commonly used for qualification. The overlay will pass max. $1 \mathrm{~m} / 48$ hours and max. 70 m selective attack. Fully austenitic.
